12 SERIES

2
DPA
DUALPRO
APPLIANCE

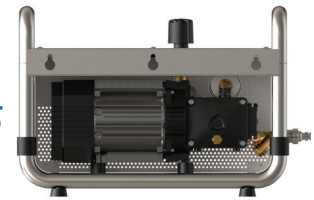

The 1210 and 1220 feature an innovative DPA system that allows users to select their preferred operating mode using a convenient three-position switch: **power off, Position I, and Position II.**

Position I activates the Total Stop System (TSS), which automatically shuts off the motor when the trigger gun is released—helping reduce wear on the pump.

Switching to **Position II** engages bypass mode for continuous run and flow, ideal for demanding applications and extended cleaning sessions.

HIGH PRESSURE WASHERS

General Features

- AISI 304 Stainless Steel Portable Frame with easy access frame covers
- Stainless steel inlet and outlets connectors
- RCA Triplex plunger with nickel-plated head, aluminum connecting rods, and ceramic pistons
- Adjustable unloader
- Self-priming system
- 2.5" Glycerin Filled Stainless Steel Pressure Gauge
- 3-position switch, off/TSS/by-pass
- Anti-vibration motor mount bushings
- Anti-vibration feet
- Welded wall mount
- Large oil level display
- Single phase induction motor
