

Colostrum - The Gold Standard for June Dairy Month

As we gear up for summer, we remember that dairy is essential to our diets, providing nutrients like protein, calcium, and vitamin D to support our bone strength, muscle repair, energy, and so much more. Bovine colostrum is the first milk produced after a calf is born. Often referred to as 'Liquid Gold,' colostrum elevates the benefits of dairy by providing:

- **Immunoglobulins** for immune system support
- **Antimicrobials** for preventing illness
- **Vitamins and Minerals** to support bone, skin, and vision health
- **Proteins, Enzymes, & Prebiotics** to enhance gut health
- **Bioactives** to stimulate recovery

High-quality colostrum is readily available through our premium ingredient line, ImmuniGen™. Throughout the month of June, we raise a cold glass of milk to our Bovine friends, the suppliers of nature's original superfood.

Your Solution to Potassium Bromate Bans

The rise in Potassium Bromate bans does not have to impede the rise of your dough.

We offer two Reddi-Sponge® non-bromated dough developers to meet your baking needs. Both reduce mixing by up to 40% and shorten lengthy fermentation times. Added benefits include enhanced dough strength, structure, texture, and volume. From fresh rolls to frozen doughs, Reddi-Sponge ensures your yeast-raised baked goods achieve the height and crumb your customers crave.

RDS

Reddi-Sponge C: A proprietary blend of sweet whey, corn flour, monocalcium phosphate, ascorbic acid and L-cysteine (vegan). Addition of dairy solids contributes to richness, flavor, and crust color.

Reddi-Sponge P-NB: A pareve dough conditioner consisting of a proprietary blend of corn flour, ascorbic acid and L-cysteine (vegan).

New York, Washington, California, & Illinois have plans to ban Potassium Bromate as soon as January 1, 2027, with several other states looking to follow suit.
