

Aftercare

Rule 1: Dont Touch It

Your piercing needs to be left alone so it can heal quickly. Touching it will increase risk of infection, and cause delays in healing times as well as piercing bumps to form.

Rule 2: Clean Every Morning and Night

Use **SALINE ONLY** to clean all sides of your piercing. Spray away all debris, you may need to hydrate debris multiple times before it will wash away if dried.

*If you are in a dirty environment add additional cleanings throughout your day to ensure your risk of infection stays as minimal as possible
